

KODAK Custom Control Tools Now Available

KODAK Custom Control Tools are now available and offer controlled sensitometric exposures complete with a processed guide strip.

Please Note: The correction factors, provided for the custom control tools, do not require calculation of precise aim densities from the guide strip included. Customers may use the guide strip as an approximate aim, but they may also determine their own aim as appropriate for each individual circumstance.

The following listings will be included in the next update of the KODAK Motion Picture Products Price Catalog.
