

Chemical Analysis

KODAK Water Quality Analysis

Catalog Number: 160 4370

Purpose

Kodak will perform a thorough chemical analysis of a water sample. The analysis includes: total dissolved solids, total iron, total copper, chlorine ion, silica, total hardness, calcium hardness, magnesium hardness, calcium concentration, and density.

Benefits

- Identification of components in water that may be causing an adverse affect on the sensitometric performance of motion picture products, or that may be associated with effluent issues at a customer facility.

Recommended Procedures

After contacting Kodak, the customer must send properly identified sample(s), in recommended shipping containers, to the agreed-upon Kodak facility.

Kodak Deliverables

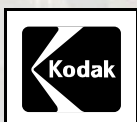

Kodak will provide a written report of the chemical analysis, including a reference to the proper standard aim (KODAK Publication H-24 or kit chemistry).

The service will be completed within 5 business days of receipt of sample unless otherwise stated.

Ordering Information

Cost varies depending on the chemical analysis requested. Contact your local Customer Service Representative or Kodak office for price and availability in your area.
